MAINTAINABILITY AUDIT · EVIDENCE FIRST

LeapScore

A fair, evidence-backed read on the codebases that carry the business.

INDICATORS	LIVE CHECKS	SCORING GATES
102	31	8

Every codebase gets a fair, evidence-backed maintainability read before it becomes an incident, a failed deal, or a rewrite.

LeapScore separates what the code proves from what the scan cannot yet measure.

THE RUBRIC

One rubric, 102 indicators

Ten categories cover the codebase without letting unknowns dilute the result.

SCOPE	COVERAGE	SCORING
10 categories	Dependency Health, Architecture, Testing, Security, Data & Schema, API Surface, Velocity, Performance, Documentation, Frontend	76 standard + 18 deep-dive + 8 conditional frontend
Every indicator	Definition, detection method, yellow/red flags, and a remediation path	Each row scores 0–3 or N/A
Category %	Applicable scores ÷ (applicable count × 3)	Unknowns and N/A never dilute the math

VERDICT CONTROLS

Eight gates that override the average

Security and exposure

Live secrets. In code, history, or config, they cap the verdict.

Critical vulnerability. Open 14+ days on an exposed path, it caps the verdict.

Hackable core. Injection, RCE, or broken login reachable, it caps the verdict.

Operational resilience

Zero tests. No tests on the most critical flow, it caps the verdict.

No backups. No backups, or restore never drilled, it caps the verdict.

FIVE GATES SHOWN. THE FULL RUBRIC EVALUATES EIGHT.

THE SCAN PATH

Paste a URL, get a sealed report

One unified scan runs under a single time budget. Fast public-signal checks come first, followed by a shallow code read that skips what does not apply. Streaming progress and a full detector trace mean nothing fails silently. The terminal state is always a report or a clearly refused reason.

Fast path

~10–15 seconds, no download.

Full scan

31 checks, up to ~4 minutes.

Degraded

Still reports, with unknowns labeled.

TRUST MODEL

Honesty is the feature, not a caveat

Measured

REAL EVIDENCE

From the code or its public metadata.

INCLUDED

Estimated

CAPPED HEURISTIC

Clearly labeled, never presented as direct evidence.

BOUNDED

Unknown

NOT YET MEASURABLE

Excluded from the score and shown as what it takes to measure.

UPSELL

ILLUSTRATIVE SAMPLE · DJANGO/DJANGO · 58 / MODERATE

LIVE TODAY · ROADMAP VISIBLE

31 of 102 checks run live today. The rest are the roadmap.

DEEP SCAN

The next evidence layer

Test sandboxes, history signals, and environment probes.

THE POINT

Unknowns are the shopping list.

The report shows exactly what deeper measurement unlocks.
